

Profile's 5 Fundamentals are the foundation to sustainable vegetation

Establishing sustainable vegetation and receiving the earliest possible Notice of Termination (NOT) are the goals of every project. Profile's 5 Fundamentals are the surest way to get you there. Integrating them into a process that entails proper planning and execution takes the guesswork out of crucial decisions. The ultimate advantage is success on the projects you undertake.

Of The Five Fundamentals, the first is key. Having the correct foundation in place from the start makes all the other choices you make that much easier and effective.

1. Assessing and Creating Optimal Soil Conditions

Soil testing provides essential information to determine what adjustments, if any, need to be made to assure a more favorable growing environment for faster, more complete vegetative growth and sustainable establishment.

2. Picking the Right Plant Species

It is essential to select plant species that are adapted to project locations, site conditions, intended use and maintenance requirements.

4. Ensuring Proper Installation

Installing these products in accordance with the manufacturer's mixing and application guidelines will maximize their performance to meet project requirements.

3. Selecting the Correct Erosion Control Material

The right cover is necessary to protect both seed and soil, taking into account the erosion control product's effectiveness, ability to facilitate growth and the functional longevity required for that protection.

5. Follow-up Inspections and Maintenance Practices

Continually monitoring how projects are progressing is the best way to make sure all site requirements and compliance issues are being addressed. Maintenance may be required to mitigate unexpected challenges.

Find out how Profile Products can assist you in utilizing The 5 Fundamentals to assure success on your erosion control and vegetative establishment projects.

Soil Testing is Key to Project Success

And it's FREE!

**PROFILE SOIL SOLUTIONS
SOFTWARE**

www.ProfilePS3.com

1 STEP ONE: Log In

This gives you access to free soil testing and directions on proper soil collection techniques. With comprehensive soil testing, Profile® is able to accurately assess the necessary amendments, plant species and erosion control measures you need to establish sustainable vegetation on your projects.

2 STEP TWO: Results and Recommendations

Once testing is completed and the results are analyzed, recommendations are available to improve virtually any soil with the right combination of ProPlus® Prescriptive Solutions and ProGanics™ Biotic Soil Media™.

PROFILE IS WITH YOU EVERY STEP OF THE WAY

In addition to complimentary soil testing, you can also receive site-specific recommendations on the other Fundamentals for establishing sustainable vegetation.

Profile and your distributor will put you in touch with agronomy experts who are qualified to help you select the right plant species to meet the intended application, site characteristics and maintenance activities on your projects.

Profile provides on-site consultation to assure the products you select are properly installed in accordance with mixing and application guidelines.

Profile is the leading supplier of hydraulically applied erosion control technologies, erosion control blankets and turf reinforcement mats; and as a result, is experienced in helping you balance natural variables and product attributes to effectively achieve project success.

Profile professionals can coordinate inspections to ensure installations are in accordance with expected project outcomes. Subsequent inspections can be arranged and maintenance activities conducted after significant precipitation or other potentially damaging weather events.
